Ref: REACH NONEUsuppltr (Regulation (EC) 1907/2006)

Dear Supplier,

In accordance with REACH, EC No. 1907/2006, substances in volumes over one ton per year must be neither manufactured nor imported in the EU (even in preparations/mixtures and articles under certain conditions), unless they are registered.

As part of our own REACH requirements, we need to ensure we register all those substances as required by REACH that are contained within your products. As a result, we require the latest compositional information of the individual substances in either the preparation of your product (eg. soap component of steel wool, spray constituents of aerosol can, fragrance gel in cartridges etc.) or intended to be released from an article (eg. scent constituents of deodorised urinal screens). Substances in articles not intended to be released are not required to be registered.

Please provide evidence of chemical composition through up-to-date SDS (Safety Data Sheets) for individual substances and / or chemical analysis test reports.

It is also important that we are applying the appropriate risk management measures for your finished products and able to communicate them to our downstream users. Therefore please ensure your SDS are updated according to REACH requirements and forwarded to us as soon as possible.

It is most important that all responses are received back promptly and would therefore ask you to consider **11th August as the final date for submission.**

To assist each other with this complex legislation please provide full contact information for the person in your company responsible for REACH issues, so if we find any details that need your urgent attention we will contact you immediately.

Thank you in advance for your co-operation and I look forward to hearing from you.

Regards

N Man
